

## Infrastructure Policies – Essential services infrastructure

---

The Trust will continue to work toward a future in which all essential outback infrastructure and services are professionally managed within appropriate management frameworks.

Essential services infrastructure will be professionally maintained on a regular basis according to manufacturers' recommendations or at the discretion of the Trust's Infrastructure Manager.

Manufacturers and suppliers of essential services infrastructure will be required to provide a complete induction to the Infrastructure Manager and to community maintenance delegates where available. They will also be required to supply a clear and concise day-to-day maintenance program

In all cases it is the Trust's intention to enter into equitable agreements with consumers of essential services relating to the infrastructure that supports that essential service. These agreements will contain details of cost-sharing arrangements.
